# Service Manual

**HDTV MONITOR**

**PT-51HX43G**

**P8**

Please file and use this simplified service manual together with the main service manual for Model PT-53WX53G, Order No.MTNC030518C1. For schematics, complete replacement parts list, disassembly and alignment procedures please refer to main servicemanual. This simplified service manual includes only the differences from models included in the main service manual.

**⚠ WARNING**

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

**Panasonic®**

**IMPORTANT SAFETY NOTICE**

There are special components used in this equipment which are important for safety. These parts are marked by ⚠ in the Schematic Diagrams, Circuit Board Diagrams, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

## **1. Safety precautions**

### **General guidelines**

An isolation transformer should always be used during the servicing of a receiver whose chassis is not isolated from AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect the receiver from being damaged by accidental shorting that may occur during servicing.

When servicing, observe the original lead dress, especially in the high voltage circuit. Replace all damaged parts (also parts that show signs of overheating.)

Always replace protective devices, such as fuse, isolation resistors and capacitors, and shields after servicing the receiver. Use only manufacturer's recommended rating for fuses, circuit breakers, etc.

High potentials are present when this receiver is operating. Operation of the receiver without the rear cover introduces danger for electrical shock. Servicing should not be performed by anyone who is not thoroughly familiar with the necessary precautions when servicing high voltage equipment.

Extreme care should be practiced when handling the picture tube. Rough handling may cause it to implode due to atmospheric pressure. (14.7 lbs per sq. in.). Do not nick or scratch the glass or subject it to any undue pressure. When handling, use safety goggles and heavy gloves for protection. Discharge the picture tube by shorting the anode to chassis ground (not to the cabinet or to other mounting hardware). When discharging connect cold ground (i.e. tag ground lead) to the anode with a well insulated wire or use a grounding probe. Avoid prolonged exposure at close range to unshielded areas of the picture tube to prevent exposure to x ray radiation.

The test picture tube used for servicing the chassis at the bench should incorporate safety glass and magnetic shielding. The safety glass provides shielding for the tube viewing area against x ray radiation as well as implosion. The magnetic shield limits the x ray radiation around the bell of the picture tube in addition to the restricting magnetic effects. When using a picture tube test jig for service, ensure that the jig is capable of handling 50kV without causing x ray radiation.

Before returning a serviced receiver to the owner, the service technician must thoroughly test the unit to ensure that it is completely safe to operate. Do not use a line isolation transformer when testing.

#### Leakage current cold check

Unplug the A.C. cord and connect a jumper between the two plug prongs. Measure the resistance between the jumpered AC plug and exposed metallic parts such as screwheads, antenna terminals, control shafts, etc. If the exposed metallic part has a return path to the chassis, the reading should be between  $240k\ \Omega$  and  $5.2M\ \Omega$ . If the exposed metallic part does not have a return path to the chassis, the reading should be infinite.

#### Leakage current hot check

Plug the AC cord directly into the AC outlet. Do not use an isolation transformer during the check.

Connect a  $1.5k\ \Omega$  10 watt resistor in parallel with a  $0.15\ \mu F$  capacitor between an exposed metallic part and ground. Use earth ground, for example a water pipe.

Using a DVM with a 1000 ohms/volt sensitivity or higher, measure the AC potential across the resistor.

Repeat the procedure and measure the voltage present with all other exposed metallic parts. Verify that any potential does not exceed 0.75 volt RMS. A leakage current tester (such a Simpson model 229, Sencore model PR57 or equivalent) may be used in the above procedure, in which case any current measure must not exceed 0.5 milliampere. If any measurement is out of the specified limits, there is a possibility of a shock hazard and the receiver must be repaired and rechecked before it is returned to the customer.

Hot check circuit

#### Insulation test

Connect an insulation tester between an exposed metallic part and A.C. line. Apply 1080VAC/ 60Hz for 1 second. Confirm that the current measurement is 0.5mA ~ 2.0mA. Repeat test with other metallic exposed parts.

#### X ray radiation

##### WARNING

The potential source of x ray radiation in the PTV set is in the high voltage section and the

picture tube.

#### NOTE

It is important to use an accurate, calibrated high voltage meter.

Apply all black video signals (1080i) and confirm high voltage measures  $31.5 \pm 1.0\text{kV}$ . If the high voltage is not within the range, change C514 to 1800pF, 2000pF, 2400pF or 2700pF until the desired value is obtained. Apply NTSC white pattern and confirm the high voltage measures  $30.1 \pm 1.5\text{kV}$ . Apply HD 1080i white pattern and confirm the high voltage measures  $30.1 \pm 1.5\text{kV}$ .

## 2. About lead free solder (PbF)

#### NOTE

Lead is listed as (Pb) in the periodic table of elements. / In the information below, Pb will refer to lead solder, and PbF will refer to Lead Free Solder. / The lead free solder used in our manufacturing process and discussed below is (Sn+Ag+Cu). / That is Tin (Sn), Silver (Ag) and Copper (Cu) although other types are available.

This model uses Pb Free solder in its manufacture due to environmental conservation issues. For / service and repair work, we'd suggest the use of Pb free solder as well, although Pb solder may be / used. / PCBs manufactured using lead free solder will have the "PbF" or a leaf symbol stamped on the / back of PCB.

#### CAUTION

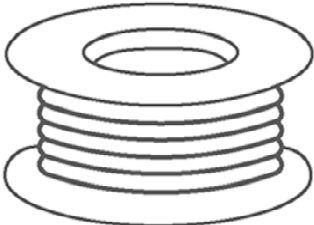

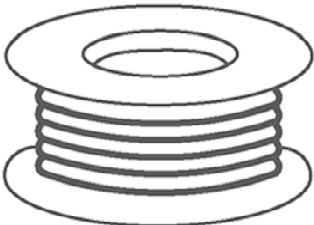

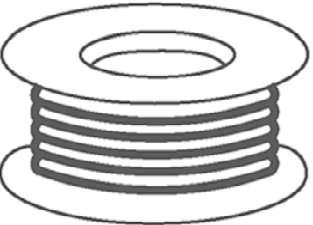

- Pb free solder has a higher melting point than standard solder. Typically the melting point is  $50 \sim 70\text{ }^{\circ}\text{F}$  ( $30 \sim 40\text{ }^{\circ}\text{C}$ ) higher. Please use a high temperature soldering iron and set it to  $700 \pm 20\text{ }^{\circ}\text{F}$  ( $370 \pm 10\text{ }^{\circ}\text{C}$ ).
- Pb free solder will tend to splash when heated too high (about  $1100\text{ }^{\circ}\text{F}$  or  $600\text{ }^{\circ}\text{C}$ ). / If you must use Pb solder, please completely remove all of the Pb free solder on the pins or solder area before applying Pb solder. If this is not practical, be sure to heat the Pb free solder until it melts, before applying Pb solder.
- After applying PbF solder to double layered boards, please check the component side for excess solder which may flow onto the opposite side.

#### Suggested Pb free solder

There are several kinds of Pb free solder available for purchase. This product uses Sn+Ag+Cu (tin, silver, copper) solder. However, Sn+Cu (tin, copper), Sn+Zn+Bi (tin, zinc, bismuth) solder can also be used.

0.3mm X 100g	0.6mm X 100g	1.0mm X 100g
		

### 3. Important safety tests

#### Measuring H.V.

The anode caps are cemented to the CRTs. To gain access for high voltage measurement, remove the red CRT's anode lead from the flyback transformer distributor. Grasp the anode lead protective cap at its bottom and squeeze it against the locking cap body inside, rotate 1/4 turn counter clockwise and pull the anode lead sleeve out of the FBT distributor. Connect a high voltage positive lead from your H.V. meter to the FBT distributor, and the common negative lead to cold ground

FBT leads removal

**Note:**

Reinsert the anode lead into the FBT distributor until it is tightly and fully seated. Turn the locking cap clockwise to lock in place.

**(EHT) Protector operation check**

With the cabinet back removed, apply a nominal 120V A.C. to the PTV.

**Over voltage test**

Preparation:

1. Turn PTV "OFF"
2. Connect a NTSC signal generator to the antenna terminal.
3. Connect DVM positive lead to D31 pin 2 and negative lead to D31 pin 1 on D-Board

4. Connect a H.V. meter (static type, class 0.1) with high voltage leads to high voltage distributor on FBT.

DVM and power supply connection

5. Connect the 15 ~ 25 V DC variable power supply positive lead to D34 or IC802 pin 2 (D Board) and negative lead to heat sink of Q551 or D825

Procedures:

1. Apply a NTSC white pattern.
2. Turn PTV ON.
3. Adjust the picture or brightness controls so that the DVM reads  $16.5 \pm 1.0$  volts.
4. Increase the variable power supply until set turns off. The set should turn off at  $16.5 \pm 1.0$  volts (DVM) and high voltage less than 36.4kV.
5. If the DVM reading is other than  $16.5 \pm 1.0$  volts, readjust picture or brightness control and repeat steps 3.
6. Turn off the variable supply and confirm that the set will turn on with the remote control.

## 4. Service notes

### NOTE

These components are affixed with glue. Be careful not to break or damage any foil under the component or at the pins of the ICs when removing. Usually applying heat to the component for a short time while twisting with tweezers will break the component loose.

Leadless chip component (surface mount)

Chip components must be replaced with identical chips due to critical foil track spacing. There are no holes in the board to mount standard transistors or diodes. Some chips capacitor or resistor board solder pads may have holes through the board, however the hole diameter limits standard resistor replacement to 1/8 watt. Standard capacitor may also be limited for the same reason. It is recommended that identical components be used.

Chip resistor have a three digit numerical resistance code, 1st and 2nd significant digits and a multiplier. Example: 162 = 1600 or 1.6k  $\Omega$  resistor, 0 = 0  $\Omega$  (jumper).

Chip capacitors generally do not have the value indicated on the capacitor. The color of the component indicates the general range of the capacitance.

Chip transistors are identified by a two letter code. The first letter indicates the type and the second letter, the grade of transistor.

Chip diodes have a two letter identification code as per the code chart and are a dual diode pack with either common anode or common cathode. Check the parts list for correct diode number.

#### **Component removal**

- 1. Use solder wick to remove solder from component end caps or terminal.**
- 2. Without pulling up, carefully twist the component with tweezers to break the adhesive.**
- 3. Do not reuse removed leadless or chip components since they are subject to stress fracture during removal.**

#### **Chip component installation**

- 1. Put a small amount of solder on the board soldering pads.**
- 2. Hold the chip component against the soldering pads with tweezers or with a miniature alligator clip and apply heat to the pad area with a 30 watt iron until solder flows. Do not apply heat for more than 3 seconds.**

**How to replace flat ic (required tools)**

- 1. Remove the solder from all of the pins of a Flat IC by using a desolder braid**

- 2. Put the iron wire under the pins of the Flat IC and pull it in the direction indicated while heating the pins using a soldering iron. A small awl can be used instead of the iron wire.**

- 3. Remove the solder from all the pads of the Flat IC by using a de solder braid**

- 4. Position the new Flat IC in place (apply the pins of the Flat IC to**

the soldering pads where the pins need to be soldered). Properly determine the positions of the soldering pads and pins by correctly aligning the polarity symbol

5. Solder all pins to the soldering pads using a fine tipped soldering iron

6. Check with a magnifier for solder bridge between the pins or for dry joint between pins and soldering pads. To remove a solder bridge, use a de solder braid as shown in the figure below

#### **IMPORTANT**

To protect against possible damage to the solid state devices due to arcing or static discharge, make certain that all ground wires are securely connected

#### **CAUTION**

The power supply circuit is above earth ground and the chassis cannot be polarized. Use an isolation transformer when servicing the receiver to avoid damage to the test equipment or to the chassis. Connect the test equipment to the proper ground(HOT or COLD) when servicing, or incorrect voltages will be measured.

#### **WARNING**

This receiver has been designed to meet or exceed applicable safety and x ray radiation protection as specified by government agencies and independent testing laboratories.

To maintain original product safety design standards relative to x

ray radiation and shock and fire hazard, parts indicated with the symbol  on the schematic must be replaced with identical parts. Order parts from the manufacturer's parts center using the parts numbers shown in this service manual, or provide the chassis number and the part reference number. For optimum performance and reliability, all other parts should be replaced with components of identical specification.

## 5. PTV Location of controls

Quick reference control operation	
1	<b>Power</b> - Press to turn ON or OFF.
2	<b>Volume</b> - Press to adjust sound level, or to adjust audio menus, video menus, and select operating features when menus are displayed
3	<b>Channel</b> - Press to select programmed channels. Press to highlight desired features when menus are displayed. Also use to select cable converter box channels after programming remote control infra-red codes (the TV/AUX/CABLE switch must be set in CABLE position).
4	<b>Action</b> - Press to display main menu and access on screen feature and adjustment menus.
5	<b>TV/Video</b> - Press to select TV or one of the video inputs, for the main picture or the PIP frame (when PIP frame is displayed).

## 6. Receiver feature table

FEATURE/MODEL	PT-51HX43G
CHASSIS	AP825
MICRO	256K
MENU LANGUAGE	ENG/SPAN/FR

DIMENSIONS (H/W/D) mm/IN	(1361/1137/653)mm, (53.58/44.76/25.7)IN

**Note:**

Specifications are subject to change without notice or obligation. Weights and dimensions are approximate.

## 7. Convergence alignment template

The convergence alignment template is a grid approximately the size of the viewing screen used to ensure the proper size and shape of the alignment rasters. It is 6 blocks across by 8 blocks high. The grid dimensions vary with the mode of operation. Apply a convergence alignment template to the viewing screen of the PTV. Make sure the center lines are properly aligned. If a template is not available, one can be created by following the instructions below. Create a convergence alignment template by drawing a pattern, as in the figure, in the actual dimensions on transparent film or tracing paper. Start with the Horizontal and vertical center axis and work outwards until the pattern is complete. Pay attention to the actual dimensions of the pattern.

Template dimensions:

**- 51" Models: 1036\_mm horizontal x 778\_mm vertical.**

Grid dimensions:

SCREEN	MODE	HORIZONTAL	VERTICAL
51"	480i_p	43.00_mm	26.00_mm
	1080i (4:3)	40.00_mm	27.75_mm
	1080i (16:9)	40.00_mm	20.79_mm

**NOTE:**

A convergence alignment template, part number TXFQD01ESER1 for 51" is available through Matsushita/Panasonic Services

## 8. Board description table

BOARD	PART NUMBER	DESCRIPTION
A-BOARD	TNP2AH045	MAIN CHASSIS
D-BOARD	TNP2AH046	POWER SUPPLY
* DC-BOARD	TNP2AA120	CONVERGENCE CIRCUIT
* DV-BOARD	TNP2AA114	DVI BOARD
* DG-BOARD	TNP2AA126	PIP PROCESSING, SPLIT, SEARCH, FO
LB-BOARD	TNP2AA147	BLUE PRT
LR-BOARD	TNP2AA145	RED PRT
LG-BOARD	TNP2AA146	GREEN PRT
K-BOARD	TNP2AA089AA	FRONT KEY BOARD
G-BOARD	TNP2AA090AA	FRONT A/V BOARD
R-BOARD	TNPA0615AB	IR BOARD

**NOTE**

When ordering a replacement board assembly, append an "S" to the board number

**EXAMPLE**

To order the A Board, the replacement board is TNP2AH045S

**\* NOTE:**

The DC-Board, DG-Board and DV-Board are non-serviceable boards, except for DV-Board audio connector and DVI connector. If any of these boards or DV-Board components are defective, replace it with a new one.

## 9. Parts list

### 9.1. Description of abbreviations guide

#### Important Safety Notice

Components identified by  mark have special characteristics important for safety. When replacing any of these components, use manufacturer's specified parts.

#### Abbreviation of part name and description

##### 1. Resistor

Example :

ERD25TJ104 **C** 100K $\Omega$ , J, 1/4W  
Type Allowance

Type	Allowance
C : Carbon	F : $\pm 1\%$
F : Fuse	G : $\pm 2\%$
M : Metal Oxide Metal Film	J : $\pm 5\%$ K : $\pm 10\%$
S : Solid	M : $\pm 20\%$
W : Wire Wound	

##### 2. Capacitor

Example :

ECKF1H103ZF **C** 0.01 $\mu$ F, Z, 50V  
Type Allowance

Type	Allowance
C : Carbon	C : $\pm 0.25\text{pF}$
E : Electrolytic	D : $\pm 0.5\text{pF}$
P : Polyester Polypropylene	F : $\pm 1\text{pF}$ G : $\pm 3\%$
T : Tantalum	J : $\pm 5\%$ K : $\pm 10\%$ L : $\pm 15\%$ M : $\pm 20\%$ P : $\pm 100\%$ , -0% Z : $\pm 80\%$ , -20%

### 9.2. Difference Parts list from PT-47WX43G

**NOTE:**

ADD the following difference parts list to main manual order No. MTNC030518C1 (PT-47WX43G)

# 1. Safety precautions

## General guidelines

An isolation transformer should always be used during the servicing of a receiver whose chassis is not isolated from AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect the receiver from being damaged by accidental shorting that may occur during servicing.

When servicing, observe the original lead dress, especially in the high voltage circuit. Replace all damaged parts (also parts that show signs of overheating.)

Always replace protective devices, such as fuse, paper, isolation resistors and capacitors, and shields after servicing the receiver. Use only manufacturer's recommended rating for fuses, circuit breakers, etc.

High potentials are present when this receiver is operating. Operation of the receiver without the rear cover introduces danger for electrical shock. Servicing should not be performed by anyone who is not thoroughly familiar with the necessary precautions when servicing high voltage equipment.

Extreme care should be practiced when handling the picture tube. Rough handling may cause it to implode due to atmospheric pressure. (14.7 lbs per sq. in.). Do not nick or scratch the glass or subject it to any undue pressure. When handling, use safety goggles and heavy gloves for protection.

Discharge the picture tube by shorting the anode to chassis ground (not to the cabinet or to other mounting hardware). When discharging connect cold ground (i.e. tag ground lead) to the anode with a well insulated wire or use a grounding probe. Avoid prolonged exposure at close range to unshielded areas of the picture tube to prevent exposure to x ray radiation.

The test picture tube used for servicing the chassis at the bench should incorporate safety glass and magnetic shielding. The safety glass provides shielding for the tube viewing area against x ray radiation as well as implosion. The magnetic shield limits the x ray radiation around the bell of the picture tube in addition to the restricting magnetic effects. When using a picture tube test jig for service, ensure that the jig is capable of handling 50kV without causing x ray radiation.

Before returning a serviced receiver to the owner, the service technician must thoroughly test the unit to ensure that it is completely safe to operate. Do not use a line isolation transformer when testing.

## Leakage current cold check

Unplug the A.C. cord and connect a jumper between the two plug prongs. Measure the resistance between the jumpered AC plug and exposed metallic parts such as screwheads, antenna terminals, control shafts, etc. If the exposed metallic part has a return path to the chassis, the reading should be between 240k  $\Omega$  and 5.2M  $\Omega$ . If the exposed metallic part does not have a return path to the chassis, the reading should be infinite.

## Leakage current hot check

Plug the AC cord directly into the AC outlet. Do not use an isolation transformer during the check.

Connect a 1.5k  $\Omega$  10 watt resistor in parallel with a 0.15  $\mu$  F capacitor between an exposed metallic part and ground. Use earth ground, for example a water pipe.

Using a DVM with a 1000 ohms/volt sensitivity or higher, measure the AC potential across the resistor. Repeat the procedure and measure the voltage present with all other exposed metallic parts.

Verify that any potential does not exceed 0.75 volt RMS. A leakage current tester (such as a Simpson model 229, Sencore model PR57 or equivalent) may be used in the above procedure, in which case any current measure must not exceed 0.5 milliamperes. If any measurement is out of the specified limits, there is a possibility of a shock hazard and the receiver must be repaired and rechecked before it is returned to the customer.

#### Insulation test

Connect an insulation tester between an exposed metallic part and A.C. line. Apply 1080VAC/60Hz for 1 second. Confirm that the current measurement is 0.5mA ~ 2.0mA. Repeat test with other metallic exposed parts.

#### X ray radiation

##### WARNING

The potential source of x ray radiation in the PTV set is in the high voltage section and the picture tube.

##### NOTE

It is important to use an accurate, calibrated high voltage meter.

Apply all black video signals (1080i) and confirm high voltage measures  $31.5 \pm 1.0\text{kV}$ . If the high voltage is not within the range, change C514 to 1800pF, 2000pF, 2400pF or 2700pF until the desired value is obtained. Apply NTSC white pattern and confirm the high voltage measures  $30.1 \pm 1.5\text{kV}$ . Apply HD 1080i white pattern and confirm the high voltage measures  $30.1 \pm 1.5\text{kV}$ .

## 2. About lead free solder (PbF)

##### NOTE

Lead is listed as (Pb) in the periodic table of elements. / In the information below, Pb will refer to lead solder, and PbF will refer to Lead Free Solder. / The lead free solder used in our manufacturing process and discussed below is (Sn+Ag+Cu). / That is Tin (Sn), Silver (Ag) and Copper (Cu) although other types are available.

This model uses Pb Free solder in its manufacture due to environmental conservation issues. For service and repair work, we'd suggest the use of Pb free solder as well, although Pb solder may be used. / PCBs manufactured using lead free solder will have the "PbF" or a leaf symbol stamped on the back of PCB.

**CAUTION**

- Pb free solder has a higher melting point than standard solder.  
Typically the melting point is 50 ~ 70 °F (30 ~ 40 °C) higher. Please use a high temperature soldering iron and set it to 700 ± 20 °F (370 ± 10 °C).
- Pb free solder will tend to splash when heated too high (about 1100 °F or 600 °C). / If you must use Pb solder, please completely remove all of the Pb free solder on the pins or solder area before applying Pb solder. If this is not practical, be sure to heat the Pb free solder until it melts, before applying Pb solder.
- After applying PbF solder to double layered boards, please check the component side for excess solder which may flow onto the opposite side.

**Suggested Pb free solder**

There are several kinds of Pb free solder available for purchase. This product uses Sn+Ag+Cu (tin, silver, copper) solder. However, Sn+Cu (tin, copper), Sn+Zn+Bi (tin, zinc, bismuth) solder can also be used.

0.3mm X 100g	0.6mm X 100g	1.0mm X 100g

### 3. Important safety tests

#### Measuring H.V.

The anode caps are cemented to the CRTs. To gain access for high voltage measurement, remove the red CRT's anode lead from the flyback transformer distributor. Grasp the anode lead protective cap at its bottom and squeeze it against the locking cap body inside, rotate 1/4 turn counter clockwise and pull the anode lead sleeve out of the FBT distributor. Connect a high voltage positive lead from your H.V. meter to the FBT distributor, and the common negative lead to cold ground

FBT leads removal

#### Note:

Reinsert the anode lead into the FBT distributor until it is tightly and fully seated. Turn the locking cap clockwise to lock in place.

#### (EHT) Protector operation check

With the cabinet back removed, apply a nominal 120V A.C. to the PTV.

#### Over voltage test

##### Preparation:

1. Turn PTV "OFF"
2. Connect a NTSC signal generator to the antenna terminal.
3. Connect DVM positive lead to D31 pin 2 and negative lead to D31 pin 1 on D-Board

H.V. measurement

4. Connect a H.V. meter (static type, class 0.1) with high voltage leads to

**high voltage distributor on FBT.**

**DVM and power supply connection**

5. Connect the 15 ~ 25 V DC variable power supply positive lead to D34 or IC802 pin 2 (D Board) and negative lead to heat sink of Q551 or D825

**Procedures:**

1. Apply a NTSC white pattern.
2. Turn PTV ON.
3. Adjust the picture or brightness controls so that the DVM reads  $12.4 \pm 0.4$  volts.
4. Increase the variable power supply until set turns off. The set should turn off at  $12.4 \pm 0.4$  volts (DVM) and high voltage less than 36.4kV.
5. If the DVM reading is other than  $12.4 \pm 0.4$  volts, readjust picture or brightness control and repeat steps 3.
6. Turn off the variable supply and confirm that the set will turn on with the remote control.

## **4. Service notes**

### **NOTE**

These components are affixed with glue. Be careful not to break or damage any foil under the component or at the pins of the ICs when removing. Usually applying heat to the component for a short time while twisting with tweezers will break the component loose.

**Leadless chip component (surface mount)**

Chip components must be replaced with identical chips due to critical foil track spacing. There are no

holes in the board to mount standard transistors or diodes. Some chips capacitor or resistor board solder pads may have holes through the board, however the hole diameter limits standard resistor replacement to 1/8 watt. Standard capacitor may also be limited for the same reason. It is recommended that identical components be used.

Chip resistor have a three digit numerical resistance code, 1st and 2nd significant digits and a multiplier. Example: 162 = 1600 or 1.6k  $\Omega$  resistor, 0 = 0  $\Omega$  (jumper).

Chip capacitors generally do not have the value indicated on the capacitor. The color of the component indicates the general range of the capacitance.

Chip transistors are identified by a two letter code. The first letter indicates the type and the second letter, the grade of transistor.

Chip diodes have a two letter identification code as per the code chart and are a dual diode pack with either common anode or common cathode. Check the parts list for correct diode number.

#### Component removal

1. Use solder wick to remove solder from component end caps or terminal.
2. Without pulling up, carefully twist the component with tweezers to break the adhesive.
3. Do not reuse removed leadless or chip components since they are subject to stress fracture during removal.

#### Chip component installation

1. Put a small amount of solder on the board soldering pads.
2. Hold the chip component against the soldering pads with tweezers or with a miniature alligator clip and apply heat to the pad area with a 30 watt iron until solder flows. Do not apply heat for more than 3 seconds.

#### How to replace flat ic (required tools)

1. Remove the solder from all of the pins of a Flat IC by using a desolder braid

2. Put the iron wire under the pins of the Flat IC and pull it in the direction indicated while heating the pins using a soldering iron. A small awl can be used instead of the iron wire.

3. Remove the solder from all the pads of the Flat IC by using a de solder braid

4. Position the new Flat IC in place (apply the pins of the Flat IC to the soldering pads where the pins need to be soldered). Properly determine the positions of the soldering pads and pins by correctly aligning the polarity symbol

5. Solder all pins to the soldering pads using a fine tipped soldering iron

6. Check with a magnifier for solder bridge between the pins or for dry joint between pins and soldering pads. To remove a solder bridge, use a de solder braid as shown in the figure below

#### IMPORTANT

To protect against possible damage to the solid state devices due to arcing or static discharge, make certain that all ground wires are securely connected

#### CAUTION

The power supply circuit is above earth ground and the chassis cannot be polarized. Use an isolation transformer when servicing the receiver to avoid damage to the test equipment or to the chassis. Connect the test equipment to the proper ground(HOT or COLD) when servicing, or incorrect voltages will be measured.

#### WARNING

This receiver has been designed to meet or exceed applicable safety and x ray radiation protection as specified by government agencies and independent testing laboratories.

To maintain original product safety design standards relative to x ray radiation and shock and fire hazard, parts indicated with the symbol ⚠ on the schematic must be replaced with identical parts. Order parts from the manufacturer's parts center using the parts numbers shown in this service manual, or provide the chassis number and the part reference number.

For optimum performance and reliability, all other parts should be replaced with components of identical specification.

## 5. PTV Location of controls

Quick reference control operation	
1	<b>Power</b> - Press to turn ON or OFF.
2	<b>Volume</b> - Press to adjust sound level, or to adjust audio menus, video menus, and select operating features when menus are displayed
3	<b>Channel</b> - Press to select programmed channels. Press to highlight desired features when menus are displayed. Also use to select cable converter box channels after programming remote control infra-red codes (the TV/AUX/CABLE switch must be set in CABLE position).
4	<b>Action</b> - Press to display main menu and access on screen feature and adjustment menus.
5	<b>TV/Video</b> - Press to select TV or one of the video inputs, for the main picture or the PIP frame (when PIP frame is displayed).

## 7. Board description table

BOARD	PART NUMBER	DESCRIPTION
A-BOARD	TNP2AH045	MAIN CHASSIS
D-BOARD	TNP2AH046	POWER SUPPLY
* DC-BOARD	TNPAA120	CONVERGENCE CIRCUIT
* DV-BOARD	TNP2AA114	DVI BOARD
* DG-BOARD	TNP2AA126	PIP PROCESSING, SPLIT, SEARCH, FORMATS
LB-BOARD	TNP2AA147	BLUE PRT
LR-BOARD	TNP2AA145	RED PRT
LG-BOARD	TNP2AA146	GREEN PRT
K-BOARD	TNP2AA089AA	FRONT KEY BOARD
G-BOARD	TNP2AA090AA	FRONT A/V BOARD
R-BOARD	TNPA0615AB	IR BOARD

### NOTE

When ordering a replacement board assembly, append an “S” to the board number

### EXAMPLE

To order the A Board, the replacement board is TNP2AH045S

\*

The DC-Board, DG-Board and DV-Board are non-serviceable boards, except for DV-Board audio connector and DVI connector. If any of these boards or DV-Board components are defective, replace it with a new one.

## 8. Location of controls (EUR7603Z90 remote)

**Note:**

For additional information for this remote please refer to the owner's manual section remote operation, listed on the parts list section.

## 9. Location of controls (EUR7613Z40 remote)

**Note:**

For additional information for this remote please refer to the owner's manual section remote operation, listed on the parts list section.

## 10. Auto diagnosis feature

This receiver incorporates a new self diagnosis feature. With this new feature will be easier for the technician to detect the failures. There is a LED located by the keyboard on the front panel, this LED will start flashing when SOS is detected by the circuits located in specific areas, depending on how many times the LED is flashing, this will tell you what circuit should be checked. Make a count of flashing and see the table shown below. Please use this feature effectively especially for intermittent problems.

NUMBER OF FLASHES	POSSIBLE CIRCUIT
1	+140
2	LOW D.C.
3	CONVERGENCE
4	HHS
5	IC4511
6	IC4518

## 11. EEPROM copy jig

This PTV has a feature that allows to clone convergence and main EEPROM data adjustments from a PTV to other by connecting a jig to the PTV set. A jig part number TXFJIG01SER, is available through Matsushita/Panasonic Services.

**Preparation:**

To connect this jig, remove the lower back cover as instructed on disassembly for service section on this service manual and insert the jig into A10 connector located on the A-Board. (See figure)

**Procedure to copy data:**

1. Enter to service mode and display service menu.
2. Select “AREA” DAC and then press ACTION button on remote to enter. Press VOL right/left to select one of the following options then press ACTION:
  - Select ALL to copy all main EEPROM data
  - Select ADJ to copy only adjustment data.
  - Select FIX to copy only fix data
3. To copy data from main EEPROM to jig, select “IN → EX” DAC and press ACTION button on remote.
4. To copy data from jig to main EEPROM, select “EX → IN” DAC and press ACTION button on remote.

**Procedure to copy convergence:**

1. Enter to service mode and display service menu
2. Select “FINE” DAC and press ACTION on remote.
3. Press “8” on remote.
4. Select from and then press ACTION on remote:
  - INT to copy data from internal EEPROM to jig

- EXT to copy from jig to internal EEPROM.

5. Then select from and press ACTION on remote:

- 480i\_p format
- 1080i format
- Z480i format (480i ZOOM mode)
- NOT USE to back up data
- ALL to copy all convergence data from internal EEPROM
- D480i (default factory preset)
- D1080i (default factory preset)

**NOTE:**

The stated as default factory preset contain the factory DATA; Use these when data was lost or is hard to adjust.

6. Select from and then press ACTION on remote:

- INT to copy data to internal EEPROM
- EXT to copy data to jig.

7. Then select which data format you want to copy to.

8. When completed, exit the service mode.

## 12. A-Board check points

A-Board check points

**NOTE:**

All the measurements are in DC with a digital multimeter, color bar pattern, picture settings normalized and sound set to minimum.

## 13. Chassis& boards layout (location of main components)

Chassis and boards layout

**Back View**

**Front View**

**A-BOARD**

**DG-BOARD TOP VIEW**

**DG-BOARD BOTTOM VIEW**

## 14. Disassembly for service

### NOTE:

Board ground wires may have to be disconnected to disassemble some boards. All ground wires must be reconnected using jumper leads, if necessary, before power is applied to PTV for service.

### Speaker grille removal

Some models come with three pieces (sides for speakers and center cover); Speaker grille(s), it is secured to the cabinet of the PTV or on the sides. Grip panel(s) from the sides and middle upper part for one piece models, gently pull forward to remove. When reassembling, make certain to firmly press on the panel where the insertion points (5) are located, one at each corner and one at the middle top edge

### Speaker grille removal (may vary)

#### **Keyboard and front A/V inputs removal**

- 1. Remove the speaker grille.**
- 2. Unplug the connectors from the keyboard and front A/V inputs assemblies. Remove the screws from the control panel and tilt the front panel assembly upward and release it from the front cabinet. Then remove the screws affixing the keyboard and front A/V inputs to the control panel.**

#### **Speakers replacement**

- 1. Remove the speaker grille.**
- 2. Each speaker is secured to the cabinet with (4) screws.**
- 3. Disconnect the R and L speaker lead connectors from the speaker units.**

#### **Back lower cover removal**

- 1. Remove (7) hex screws around the perimeter, marked with arrows. See figure for screws location.**
- 2. Remove (3) screws from around the A/V terminal board (marked with arrows).**

#### **Back lower cabinet removal**

#### **Back cabinet removal**

- 1. Remove the back lower cover. (Detailed previously).**
- 2. The top back cover (plastic shell) is secured with (14) screws around its perimeter. See figure for screws location.**
- 3. Be careful not to damage the mirror secured to the underside of the back cover.**

#### **Mirror removal**

The mirror is attached inside the cabinet cover. Carefully remove the cabinet cover to access its interior surface and remove the screws securing the brackets that hold the mirror at the top and sides to the mirror.

#### **Mirror removal**

#### Screen frame removal

1. **Remove the speaker grille. Disconnect the cables leading to the keyboard and the AV panels and remove the keyboard and AV panel assembly. The assembly is secured by three (3) screws.**
2. **At this point the front cover is held only by four screws, be careful not to push the cabinet forward.**
3. **Remove screws and tilt the assembly forward while lifting it out of place.**

#### Screen assembly

1. **Remove the screen frame. See screen frame removal procedure above.**
2. **Place screen frame face down on a soft surface.**
3. **Remove all screen brackets and corner brackets**

#### Note:

The brackets are painted black (permanent marker) on the edge to prevent reflection on image.

#### Screen assembly

**4. Remove the horizontal barrier panel at the back of the cabinet.**

**5. Unplug connectors (K1, G1 and speaker connectors) and pull out the main chassis block.**

**Note:**

Main chassis block can be serviced either in normal position or laying on its back (protect hookup terminal from damage).

**Main chassis block**

**1. Remove the speaker grille.**

**2. Remove the back lower cabinet cover.**

**3. The main chassis block is secured to the cabinet by screws at front, behind the Speaker Grill and inside on the bottom of the optical frame).**

**4. Remove the horizontal barrier panel at the back of the cabinet.**

**5. Unplug connectors (K1, G1 and speaker connectors) and pull out the main chassis block.**

**Chassis removal**

## 14.1. Chassis assembly

The chassis assembly shown in figure includes all the electrical and optical (light box) components

Chassis front view

### A-Board

1. A-Board is secured to the chassis tray with five screws.
2. The A-Board is mated to the D-Board by four flexible connectors (male side of connectors): A1, A2, A3 & A4. To remove this board, unplug the connectors on the A-Board pulling from the sides of each connector.

### NOTE:

Some tie wraps that secure the wire dressings may need to be unfastened for chassis removal.

#### **D-Board**

- 1. D-Board is secured to the chassis tray with five screws.**
- 2. The D-Board is mated to the A-Board by four connectors (female side of connectors): D1, D2, D3 & D4. To remove this board, unplug the connectors on the A-Board pulling from the sides of each connector.**

#### **NOTE:**

Some tie-wraps that secure the wire dressings may need to be unfastened for chassis removal.

#### **DG-Board**

- 1. Plugs onto the D-Board at the A16, A17 and A18 (DG1, DG2 and DG3 respectively) connectors.**

#### **NOTE:**

This board is non-serviceable. / When removing this board pull carefully.

#### **DV-Board**

- 1. Plugs onto the A-Board at the A5 (DV1) connectors.**
- 2. This board has two Grommet squares, be careful to do not screw too tight, otherwise this grommet screw hole will get stripped.**

**NOTE:**

This board is non-serviceable. Except for JK002 (DVI AUDIO CONNECTOR) and JK002 (DVI CONNECTOR) / When removing this board pull carefully.

**DC-Board**

1. Plugs onto the D-Board at the D21, D22 and D23 (DC1, DC2 and DC3 respectively) connectors.

**NOTE:**

This board is non-serviceable. / When removing this board pull carefully.

**R-Board**

1. This board is secured to the upper front side of the light box by one screw, and plugged to R1 connector from A51 on A-Board

**LR, LG and LB Board**

1. Each board is plugged into the socket on the PRT neck, LR-Board on red PRT, LG-Board on green PRT and LB-Board on blue PRT.

## **14.2. Disassembly for CRT replacement**

To facilitate CRT replacement, the complete CRT mounting chassis does not need to be removed.

1. Remove the main chassis block from the cabinet.
2. Remove the optical bracket metal cover (rear side) by removing (6) screws from back, (2) screws from top, and (2) screws from each side.

CRT replacement

3. Remove the defective CRT anode lead from the high voltage distributor block that is mounted on the flyback transformer. Discharge to CRT chassis.
  4. Unplug connectors from the B-Board. See board layout. B9 for red, B10 for green, or B11 for blue
  5. Unplug the defective CRT black DAG ground connector from the CRT Board.
  6. Remove the CRT Board from the defective CRT neck.
  7. Remove (2) screws from the defective CRT housing.
- Caution:  
Do not remove the (4) CRT lens screws and Support the CRT assembly when loosening screws.

CRT replacement

**Focus pack location**

**Focus pack**

- 8. Release CRT anode lead from CRT chassis wire clamp and all other wires from holders.**
- 9. Loosen a screw that secures the DY and remove it from the CRT neck.**  
**Caution:**  
**To insure protection against x ray radiation, the lens must be mounted in place at all times when power is applied to the PTV**

#### **CRT replacement**

- 1. Remove CRT focus lens assembly (4 screws)**

**CRT assembly**

2. Lay CRT face down on a soft cloth.
3. Note position of yoke with centering tabs and remove from defective CRT.
4. Remove CRT DAG ground from defective CRT. Mount it on the replacement CRT exactly as it was on the defective CRT.

Note:

Replacement CRT is supplied with H.V. anode lead attached.

5. Wire the anode lead wire.
6. Install yoke with other CRT neck assemblies on CRT neck in the same order and position as removed from the defective CRT.
7. Press yoke against bell of CRT and tighten the clamp just snug enough so it will not easily shift.
8. Assemble CRT focus lens assembly to new CRT with (4) screws. Make sure focus lens adjustment nut is in the same location as on other CRT focus lens

CRT screw tightening order

Note:

Please assemble with screws in the order shown and tighten with the same torque.

Optical block position adjustment

Optical block position

The optical block mounting has holes to allow for the different size projection screens. These mounts will adjust to projection screens. If the optical block is removed for service or is replaced, it is important that the correct mounting holes are used.

### 14.3. PTV screen assemblies

### 14.4. Screen assemblies warning

When storing or disposing of screen assemblies, be sure not to place them in direct sunlight. These screens may act as a magnifying glass and could cause a fire.

## 15. B+ voltages table

Preparation:

Set the following controls

- Picture to Normal
- Bright to Normal
- Volume to MIN (0)

Procedure:

1. Apply a NTSC COLOR BAR pattern
2. Connect the negative lead of the digital voltmeter to TPGND1 (cold ground).
3. Connect the positive lead of the digital voltmeter to each test point and confirm the B+ voltages.

No.	D-Board Test point	Voltage
1	TPD14	138.6±1.0
2	TPD13	19.0±1.5
3	TPD12	19.0±1.5
4	TPD11	-19.0±1.5
5	TPD10	22.0±1.5
6	C845 (-)	-22.5±1.5
No.	A-Board Test points	Voltage
1	TPA031	9.0±0.5
2	TPA030	5.0±0.5

## 16. CRT Set Up

### CAUTION:

Insure yoke plugs on the A Board are reconnected before turning the PTV ON to prevent damage to the horizontal output transistor and/or CRTs.

1. Connect test generator to the antenna terminal and set for a monoscope pattern.
2. Loosen yoke clamp, seat yoke against bell of CRT and rotate to correct yoke tilt (compare to adjacent CRT). Tighten yoke clamp.
3. Remove adhesive from centering tabs and set centering tabs for zero correction.

4. Cover replacement CRT lens and static converge the tubes not replaced, if needed. Check size and linearity of pattern and adjust as required
5. Uncover replacement CRT lens and cover other two CRT lenses. Adjust electrical and optical focus (lens), if required.
6. Uncover all CRT lenses and use yoke centering magnet to converge replacement CRT (in center area of screen only) with other two CRTs. Disregard of convergence in areas other than center area.
7. Perform white balance adjustments.

### 16.1. Dynamic focus adjustments

1. Focus adjustments should be performed after 1 hour of aging.
2. Use oscilloscope with 100 : 1 probe.
3. Apply a NTSC crosshatch pattern to adjust focus.
4. Adjust the red, blue and green focus VR on the focus block for best

focus of overall picture of each CRT.

D. focus adjustment waveform

5. To change DAF DATA, enter to service mode, then press POWER on remote to display DACs menu, then select DAC by pressing CH (RIGHT/ LEFT) and VOL (UP/DOWN), then press ACTION to enter to DAC, then adjust by pressing VOL (RIGHT/LEFT);press ACTION, to save press ACTION again or OTHER to exit without saving.

Procedure:

NOTE:

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set top box DTV decoder.

## 1. Enter to service mode and set the following default DATA

	NTSC	NTSC ZOOM	1080i
H-PARA	+170	+170	+170
V-SAW	0	0	0
V-PARA	+14	+14	+16

NOTE:

The signal (NTSC, 1080i and NTSC in ZOOM option), should be applied and displayed to enter values for specific format adjustment.

2. For 1080i set the default values.
3. For NTSC and NTSC ZOOM apply a white pattern and perform the following steps.
4. Connect the scope probe to D33, GND to Q551 heat sink.
5. Confirm that level of A is  $640 \pm 50_V$ , adjust / "H-PAR" DAC to set to specification level.
6. Confirm that the voltage level in D33 is similar between point E and F, if not, adjust V-SAW DAC.
7. Confirm that level of B is  $280 \pm 40_V$ , adjust / "V-PAR" DAC to set to

specification level.

8. Confirm that level of C is more than 20 V, adjust / “H-PAR” DAC to set to specification level.

## 16.2. Focus - Electrical& optical adjustments

(use for minor adjustment or for final adjustment, for complete adjustment see following section.)

### Electrical Adjustment

#### NOTE:

1080i, 480p, 480i pattern can be obtained from Panasonic’s TU-DST51 set-top box DTV decoder.

### 1. Apply a NTSC crosshatch with dots pattern

#### Lens focus adjustment

	RED	GREEN	BLUE
Electric focus	B	A/B	A
Optical Focus	B	A/B	A

2. Set VIDEO “C\_OFF” DAC from 00 to 02, and project only red. Adjust red focus VR so that focus is best

#### Focus pack

3. Adjust red lens focus (mechanical) until focus is best.
4. Adjust red focus VR again.
5. Set VIDEO “C\_OFF” DAC from 00 to 01, and project only green.

6. Repeat steps for green only.
7. Set VIDEO "C\_OFF" DAC from 00 to 03, and project only blue.
8. Repeat steps for blue only.

#### 16.2.1. Focus - Optical lens adjustment

##### Optical adjustments

**NOTE:**

This adjustment normally should not require resetting unless the lens has been replaced or adjustment has changed.

1. Optical focus adjustment is located on the top of each CRT lens system. Loosen the adjustment knurled locking knob.

#### REAR VIEW

2. Turn the PTV ON. Apply and view a crosshatch with dots pattern.
3. Adjust each lens focus for best focus while viewing each CRT.
4. Cover the red and blue CRT, projecting green only. Rotate the green lens for best focus around screen center area.
5. Do the same for the red focus lens while projecting red only.
6. Repeat for blue.
7. Align VM coils.

## 17. Electronic Adjustments

### 17.1. NTSC Horizontal phase adjustment (H POS)

This adjustment is intended to correct the horizontal position of the picture

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

1. Apply a NTSC pattern that lets adjust the image to correct vertical size (see above note).
2. Set VIDEO "C\_OFF" DAC from 00 to 01 (to project only green).
3. Set DAC MUTE from 00 to 01 (disabling digital convergence).
4. Turn green deflection yoke until line is perfectly horizontal.
5. Adjust "H POS" DAC data so that pattern is in the center of screen
6. Enable digital convergence by changing DAC MUTE from 01 to 00.
7. Set VIDEO "C\_OFF" DAC from 01 to 00

### 17.2. HD 1080i Horizontal phase adjustment (H POS)

This adjustment is intended to correct the horizontal position of the picture for HD 1080i mode.

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

1. Apply a HD 1080i pattern (see above note).
2. Repeat NTSC horizontal phase adjustment from step 2

### 17.3. Centering magnets adjustment

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

**Procedures:**

1. Apply a NTSC crosshatch pattern with dots.
2. Set VIDEO "C\_OFF" DAC from 00 to 01 to project only green.
3. Set DAC MUTE from 00 to 01 (disabling digital convergence).
4. Loosen the deflection coil screw on the green CRT.
5. Adjust green deflection coil until the horizontal center line is horizontal.
6. Adjust centering magnets until the green pattern is equal on left and right. Adjust also for horizontal and vertical tilt.

**NOTE:**

Push deflection coil to top of CRT neck, then tighten deflection screw after adjusting each CRT centering and tilt.

7. Set VIDEO "C\_OFF" DAC from 01 to 03 to project only blue. Adjust deflection coil until the horizontal center line matches the pattern of the grid and is leveled.
8. Adjust blue centering magnets until the pattern center is at the appropriate distance as indicated on the following figure.

Centering magnets adjustment

9. Set VIDEO “C\_OFF” DAC from 01 to 02 to project only red.
10. Adjust red deflection coil until the horizontal center line matches the pattern of the grid and is leveled.
11. Adjust red centering magnets until the pattern center is at the appropriate distance as indicated on figure.
12. Enable digital convergence by changing DAC MUTE from 01 to 00.
13. Set VIDEO “C\_OFF” DAC from 02 to 00. Following the adjustment, make sure that all deflection coils are pushed completely toward the CRT cones and that all screws are tightened.

#### 17.4. NTSC Vertical linearity adjustment (V-C and V-S)

This adjustment is intended to make the picture vertically proportional (top, center and bottom) for NTSC mode

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic’s TU-DST51 set-top box DTV decoder.

1. Apply a NTSC pattern that lets adjust the image to correct vertical linearity (see above note).
2. Set VIDEO “C\_OFF” DAC from 00 to 01 (to project only green).
3. Set DAC MUTE from 00 to 01 (disabling digital convergence).
4. Adjust centering magnets so that the center of the pattern get aligned with screen frame center.
5. Adjust VDEF “V-C” and “V-S” DAC until vertical size is proportional on top and bottom. Confirm to correct linearity in the middle of the screen.
6. Set DAC MUTE from 01 to 00 (disabling digital convergence).
7. Set VIDEO “C\_OFF” DAC from 01 to 00

#### 17.5. HD 1080i Vertical linearity adjustment (V-C and V-S)

This adjustment is intended to make the picture vertically proportional (top, center and bottom) for HD 1080i mode

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

1. Apply a NTSC pattern that lets adjust the image to correct vertical linearity (see above note).
2. Repeat NTSC vertical linearity adjustment from step 2

### 17.6. NTSC Vertical size adjustment (V-AMP)

This adjustment is intended to correct the vertical size of the picture for NTSC mode

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

1. Apply a NTSC pattern that lets adjust the image to correct vertical size (see above note).
2. Set VIDEO "C\_OFF" DAC from 00 to 01 (to project only green).
3. Set DAC MUTE from 00 to 01 (disabling digital convergence).
4. Adjust centering magnets so that the center of the pattern get aligned with screen frame center.
5. Adjust VDEF "V-AMP" DAC until vertical size is proportional on top and bottom.
6. Set DAC MUTE from 01 to 00 (disabling digital convergence).
7. Set VIDEO "C\_OFF" DAC from 01 to 00

### 17.7. HD 1080i Vertical size adjustment (V AMP)

This adjustment is intended to correct the vertical size of the picture for HD 1080i mode.

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set top box DTV decoder.

1. Apply a HD 1080i pattern that lets adjust the image to correct vertical

size (see above note).

## 2. Repeat NTSC vertical size adjustment from step 2

## 17.8. NTSC ZOOM Vertical size adjustment (V AMP)

This adjustment is intended to correct the vertical size of the picture for NTSC ZOOM mode

### NOTE:

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set top box DTV decoder.

1. Apply a NTSC pattern that lets adjust the image to correct vertical size (see above note)
2. Change aspect to ZOOM mode.
3. Repeat NTSC vertical size adjustment from step 2
4. Try making circle seem rounded (in proportion)

## 17.9. NTSC Horizontal size adjustment / (H\_POS)

This adjustment is intended to correct the horizontal position of the picture for NTSC mode

### NOTE:

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

1. Apply a NTSC pattern that lets adjust the image to correct horizontal position (see above note)
2. Set VIDEO "C\_OFF" DAC from 00 to 01 to project only green.

3. Set DAC “MUTE” from 00 to 01 (disabling digital convergence).
4. Turn green deflection yoke until line is perfectly horizontal.
5. Adjust “H WID” DAC data so that pattern has the correct horizontal size.

6. Set DAC MUTE from 00 to 01 (disabling digital convergence).
7. Set VIDEO “C\_OFF” DAC from 01 to 00.

#### 17.10. HD 1080i Horizontal size adjustment (H\_POS)

This adjustment is intended to correct the horizontal position of the picture for NTSC mode

##### NOTE:

1080i, 480p, 480i pattern can be obtained from Panasonic’s TU-DST51 set-top box DTV decoder.

1. Apply a HD 1080i pattern that lets adjust the image to correct horizontal position of the image.
2. Repeat NTSC horizontal size adjustment from step 2

#### 17.11. Trapezoid adjustment (TRAP)

1. Set default value

#### 17.12. NTSC Pincushion adjustment (PCC)

This adjustment is intended to correct curved sides of the picture for NTSC mode.

##### NOTE:

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

Procedure:

1. Apply a NTSC pattern that lets adjust the image to correct curved sides (see above note)
2. Set VIDEO "C\_OFF" DAC from 00 to 01 to project only green.
3. Set DAC "MUTE" from 00 to 01 (disabling digital convergence)
4. If the distance at "A" is not  $13 \pm 5\text{mm}$ , enter H DEF "H WID" DAC and adjust by VOLUME UP/DOWN until it is  $13 \pm 5\text{mm}$ .

5. If not all corners of cross hatch appear in screen, enter V DEF "V-AMP" DAC and adjust until they appear.
6. Confirm that measurement of "A" has not changed.
7. Enable digital convergence by changing DAC MUTE from 01 to 00.
8. Set VIDEO "C\_OFF" DAC from 01 to 00.

### 17.13. HD 1080i Pincushion adjustment (PCC)

This adjustment is intended to correct curved sides of the picture for HD 1080i mode.

NOTE:

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

Procedure:

1. Apply a HD 1080i pattern that lets adjust the image to correct curved

sides (see above note).

## **2. Repeat NTSC pincushion adjustment from step 2**

### **17.14. NTSC Horizontal size adjustment (H WID)**

This adjustment is intended to adjust horizontal size of the picture for NTSC mode.

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

- 1. Apply a NTSC pattern that lets adjust the horizontal size.**
- 2. Set VIDEO "C\_OFF" DAC from 00 to 01 to project only green.**
- 3. Set DAC "MUTE" from 00 to 01 (disabling digital convergence).**
- 4. In service mode, adjust "H WID" DAC until the picture horizontal size is balanced at left and right side of screen.**
- 5. Set DAC "MUTE" from 01 to 00 (disabling digital convergence).**
- 6. Set VIDEO "C\_OFF" DAC from 01 to 00.**

### **17.15. HD 1080i Horizontal size adjustment / (H WID)**

This adjustment is intended to adjust horizontal size of the picture.

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder

- 1. Apply a HD 1080i pattern that lets adjust the horizontal size.**
- 2. Repeat NTSC horizontal size adjustment from / step 2.**

### **17.16. NTSC and HD 1080i Sub-Bright adjustment (BRIGH) and ABL check**

This adjustment is intended to set 7 IRE signal to black level mode.

**Procedure:**

- 1. Set PICTURE MODE TO VIVID, PICTURE settings to normal, NATURAL COLOR to OFF and COLOR TEMPERATURE to NORMAL.**
- 2. Connect meter (positive lead) to D31 pin 2 and (negative lead) to D31 pin 1.**
- 3. Apply a NTSC color bar with no color or if available a grey levels pattern.**
- 4. Adjust DAC "BRIGH" data so that bar near to black bar becomes near black**
- 5. Apply an HD 1080i signal and repeat this adjustment for HD 1080i mode**

6. To check ABL apply a white pattern and put user bright control to max. and confirm that reading on meter is  $12.4 \pm 0.8_V$ .

#### **17.17. Red, green& blue screen Cut-Off**

1. Use either a no input signal condition or raster from the NTSC generator.
2. Observing the green tube directly or via a reflective surface, adjust the VR on focus pack for the green tube for minimum noise.
3. Adjust the noise level in the red and blue tubes to match the noise level in the green tube.

#### **17.18. White balance adjustment**

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

Prior to this adjustment, perform sub-contrast adjustment. This adjustment requires that the service use skills in observing what a screen without color should look like (white picture).

**Preparation:**

1. Set the following in the user picture menu as follows:

- PIC MODE to VIVID
- COLOR to center (31)
- PICTURE to max (63)
- BRIGHT to center (31)
- SHARPNESS to min. (0)
- TINT to center (31)
- NATURAL COLOR to OFF
- COLOR TEMPERATURE to COOL

1. Enter the service mode.
2. Apply a NTSC black and white pattern to one of the video inputs (see above note) color bar with no color.

##### **17.18.1. High light white balance adjustment**

1. Adjust DAC R\_DR for red and B\_DR for blue adjustments.
2. Make sure the screen is not blue or green. The screen should be white

in the white area.

3. Check the black and white area for a black and white picture with even shades of gray and no color tint in the picture.

#### 17.18.2. Low light white balance adjustment

1. Adjust DAC CUT\_R for red and DAC CUT\_B for blue.
2. Check the screen for even white in all areas, no color.
3. Check the black and white pattern for a black and white picture, even shades of gray and no color tint in the low light areas.
4. Repeat the high light and low light white balance again until the white balance tracks from high light to low light.

#### 17.19. NTSC Color adjustment (TINT, B-Y\_G, R-Y\_A)

##### NOTE:

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

This adjustment requires that the servicer use its skills in observing what a colorbar pattern should look like.

##### Preparation:

1. Set the following in the user picture menu as follows:

- PIC MODE to VIVID
- COLOR to center (31)
- PICTURE to max (63)
- BRIGHT to center (31)
- SHARPNESS to min. (0)
- TINT to center (31)
- NATURAL COLOR to OFF
- COLOR TEMPERATURE to COOL

##### Procedure:

1. Apply a NTSC color bar pattern
2. Adjust DAC "TINT" so that the fourth bar from right to left becomes purple and good color balance.
3. If the adjustment is high, the bar will look pinkish, if it is low will look bluish.

4. Adjust “B-Y\_G” so blue look natural, and the rest of the colors become in balance.
5. Adjust “R-Y\_A” so red look natural, and rest of the colors become in balance.
6. Check that white bar is real white, no bluish or reddish or tending to become grey.

#### **17.20. 1080i Color adjustment (TINT, B-Y\_G, R-Y\_A)**

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic’s TU-DST51 set-top box DTV decoder.

1. Set same settings as NTSC adjustment
2. Apply a 1080i signal, and repeat adjustments as from step 2 in NTSC adjustment.
3. If pattern is not available, use a color signal in 1080i and adapt the adjustment to that available signal.

#### **17.21. Tint and color check**

Set picture mode to VIVID mode. Again, the service ability to see color and the balance of color is important for theses adjustments.

**Tint check**

1. In picture menu set PICTURE NORM to YES.
2. Apply color bars to the video input.
3. Magenta is composed of two colors, blue and red.
4. Check to see that magenta does not have too much blue or too much red.
5. Check cyan. Cyan is composed of blue and green. It should not have too much blue or green.
6. Use a test signal from a VCR or laser disk that has a pre-recorded close up of a signal that has good flesh tones.
7. The signal on the VCR or laser disk should look normal.

**Color Check**

Using a clean RF or video signal, set the color level so that it does not saturate or appear harsh. Make

sure that color is not set so that it appears dull and washed out. Look for natural colors, try to adjust the picture to appear as a normal photograph.

## 17.22. MTS circuit adjustment

Note:

It is important to adjust the MTS circuit in the order shown below.

The MTS circuit adjustment require two steps:

1. Input level adjustment.
2. Stereo separation adjustment.

Input level adjustment (MTSIN)

Preparation:

1. Connect an RMS meter (A.C. range) with filter jig as shown

2. Connect an RF signal generator to the RF antenna input.

Procedure:

1. Apply the following signal from the RF signal generator: / Video: 100 IRE flat field, 30% modulation. / Audio: 300Hz, 100% modulation, monaural ( $70 \pm 5\text{dB}$ ,  $75 \Omega$  open, P/S 10dB). Make sure to turn off 75  $\mu$  s pre-emphasis.
2. Adjust DAC “MTSIN” MTS-INPUT data until the voltage measured is  $106 \pm 6.0\text{mV RMS}$ .

Stereo separation adjustment (SEPAL & SEPAH)

Preparation:

1. Connect an RF signal generator to the RF antenna input.
2. Connect an oscilloscope probe to TPA7 (R\_out).

**Procedure:**

- 1. Set PTV to Stereo Mode (in the audio menu).**
- 2. Apply the following signal from the RF signal generator: / Video: 100 IRE flat field, 30% modulation. / Audio: 300Hz, 30% modulation, stereo (left only) (70dB  $\pm$  5dB, 75  $\Omega$  OPEN, P/S 10dB).**

**Note:**

Set the 30% modulation with the pilot light SW and N.R. switches OFF then turn them ON while testing.

- 3. Adjust MTS low  $\square$  level separation “SEPAL” DAC data (in the service menu) until the amplitude of the measured waveform on the scope is minimum.**
- 4. Apply the following signal from the RF signal generator: / Video: 100 IRE flat field, 30% modulation. / Audio: 3KHz, 30% modulation, stereo (left only). / (70dB  $\pm$  5dB, 75  $\Omega$  OPEN, P/S10dB).**

**Note:**

Set the 30% modulation with the P.L and N.R. switches OFF then turn them ON while testing.

- 5. Adjust MTS High  $\square$  Level Separation “SEPAH” DAC data until the amplitude of the waveform measured on the scope is minimum.**
- 6. Repeat above steps 2 through 5 until the amplitude is at minimum for both signals.**

## **17.23. Clock Adjustment (CLOCK)**

**Preparation:**

Connect the frequency counter from TPA9 (A-Board) to cold ground.

**Note:**

Frequency Counter probe capacitance should be 8pF or less.

**Procedure:**

- 1. Turn the PTV “ON” with the A.C. power applied.**
- 2. Measure TPA9 for frequency and record the reading.**

**Note:**

Pin 10 measurement must have at least four digits of resolution following the decimal point. Example: 000.0000

**3. Place the PTV into service mode for making electronic adjustment, select the clock adjustment DAC CLOCK and change value to 128.**

**4. Calculate and set CLOCK based on the following formula:**

$$CLOCK = 128 + 0.450 \times 106 \times \frac{\{732.422 - TPA9[Hz]\}}{732.4220}$$

**Note:**

TPA9 measurement will not change regardless of the value stored in CLOCK.

## 18. Convergence adjustment

Turn PTV on and allow it to warm up for 30 minutes prior to perform adjustments (apply a WHITE PATTERN).

**Helpful Hint:**

EEPROM jig can be used to adjust convergence, by copying convergence adjustment from a convergence adjusted PTV to other. Refer to EEPROM copy jig section on this service manual. Also EEPROM copy jig can be used to back-up the data before to perform adjustments.

**NOTE:**

1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

**IMPORTANT NOTICE:**

It is strongly recommended to first read and understand the following section prior to make any adjustment. / Convergence adjustment must be perform for 480i-p (same for interlace & progressive), ZOOM 480i and 1080i.

This PTV uses the scheme described below to correct for misconvergence of the three CRT projection tubes. There are various modes to this operation.

**Preparation:**

Place the convergence alignment template (see Convergence alignment template section on this manual) over the PTV screen. Align the center lines of the template with the mechanical center markers on the PTV screen frame. If the template is not available, create one using the dimensions provided in Convergence alignment template section on this manual. Remote control must be used during the procedure.

**Procedure:**

Apply the convergence alignment template to the PTV screen frame to converge the green raster only. Remove the convergence alignment template following this alignment. The red and blue rasters can then be aligned to the green raster.

**Raster Set-Up:**

- 1. Enter to service mode (red CHK).**
- 2. In SET-UP (menu) CONVERGENCE 1 set all values to 0.**
- 3. Cover red & blue lens with caps.**
- 4. Apply a pattern to adjust specific format:**
  - NTSC signal to adjust 480i & 480p (same for interlace and progressive).
  - 480i signal with PTV in ZOOM aspect to adjust Z480i.
  - 1080i signal to adjust 1080i.
- 5. Select "COARSE" DAC, then press ACTION to enter to "COARSE CONVERGENCE ADJ" mode.**
- 6. Press "0" key on remote.**
- 7. Press ACTION key on remote to enter to "TEST\_POS" mode.**
- 8. Move pattern by pressing VOL right - left and CH up - down so that the cursor center overlap monoscope pattern center.**

Aligned cross-hair pattern with center of picture pattern

- 9. Press "5" key on remote to exit superimpose mode (monoscope pattern disappear).**
- 10. Press "TV/VIDEO" key to enter "DATA\_POS" mode**
- 11. Adjust by pressing VOL right - left so that peak of curve is the same position as center of cursor**

Symmetrical shape

12. Press “TV/VIDEO” key on remote to enter “OSD\_POS” mode.
13. Press “5” key on remote so that monoscope pattern appears (superimpose mode)
14. Move cursor by pressing VOL right - left and CH up - down so that cursor center overlap monoscope pattern center
15. Press “0” key to go back to “CONVERGENCE ADJ” mode.
16. Press “TV/VIDEO” key to cycle through “COARSE ADJ. MODE” options

“COARSE” modes cycle

17. To change to “FINE ADJUSTMENT MODE” options (“FINE” DAC), press “TV/VIDEO” key on remote for at least 3 seconds, to go back to “COARSE ADJ MODE” options press “TV/VIDEO” on remote again for 3 seconds.
18. In “FINE ADJUSTMENT MODE” options, press “MUTE” key on remote to switch between “cursor” mode and “data” mode.
  - Cursor mode: Allows cursor movement by pressing VOL right - left and CH up - down.
  - Data mode: Allows making adjustment by pressing VOL right - left and CH up - down.
19. Either “COARSE ADJUSTMENT MODE” options or “FINE ADJUSTMENT MODE” options, press “R-TUNE” repeatedly key on remote to cycle through different color adjustments (R, G, B, White)
20. In “FINE ADJUSTMENT MODE” options, press “4” key on remote to ADD crossed sections to pattern and make effect visible between crossed sections.
21. To store adjustments press “7”, then “ACTION” key on remote,

otherwise press “POWER” then “ACTION” to exit adjustments without saving.

## 22. Remote functions, PRESS:

PRESS BUTTON	TO
1(forward) or 3(back)	change viewed color
2	change pattern
4 (only FINE mode)	change crossed sections
5	overlap
* 7	save data
8	copy from
9	clear
POWER	exit
RECALL	display values
R-TUNE	cycle colors
TV/VIDEO	change mode
TV/VIDEO (3 secs)	switch convergence mode (FINE/ COARSE)

\*

When “7” is pressed and the data is saved, it will overwrite the factory default.

## 18.1. Coarse adjustment mode (COARSE)

### NOTE:

1080i, 480p, 480i pattern can be obtained from Panasonic’s TU-DST51 set-top box DTV decoder.

### NOTE:

It is strongly recommended to first read and understand the following section prior to make any adjustment. / Convergence adjustment must be performed for 480i\_p (same for interlace & progressive), ZOOM 480i and 1080i.

### Procedure:

#### 1. Enter to “G-SIZE” mode:

- Select “COARSE” DAC
- Press ACTION on remote
- TV/VIDEO (repeatedly)
- R-TUNE (repeatedly)

2. Press “2” repeatedly and apply the pattern of border and cross.
3. Press RECALL to display values
4. Adjust size so that the line of the border closes to the screen frame at top, bottom, left and right, by pressing CH up-down and VOL right-left

“SIZE” mode adjustment

5. Press “7” then “ACTION” key on remote to save changes.
6. Enter to linearity “G-LINEAR” mode by pressing “TV/VIDEO”.
7. Adjust linearity by pressing VOL right-left until A=B.

“LINEAR” mode adjustment

8. Press “7” then “ACTION” key on remote to save changes.
9. Enter to PIN “G-PIN” mode by pressing “TV/VIDEO”
10. Adjust V\_PIN by pressing CH up-down (see figure)
11. Adjust H\_PIN by pressing VOL right-left.
12. Press “7” then “ACTION” key on remote to save changes

**“PIN” mode adjustment**

**13. Press “7” then “ACTION” key on remote to save changes**

**14. Adjust by pressing VOL right-left (see figure)**

**15. Press “7” then “ACTION” key on remote to save changes**

**“CORNER” mode adjustment**

**16. Enter to KEY “G-KEY” mode by pressing TV/VIDEO.**

**17. Adjust by pressing CH up-down (see figure)**

**18. Press “7” then “ACTION” key on remote to save changes**

**“KEY” mode adjustment**

**NOTE:**

**Confirm that pattern looks like a square and almost overlaps the screen frame, check that vertical and**

horizontal line center match with the marks on screen frame, if linearity is not good enough, repeat adjustments.

19. Enter to “STATIC” mode by pressing TV/VIDEO.

20. Press “1” or “3” repeatedly until green and red only are shown.

21. Adjust “R-STATIC” so that the center of red overlaps with the center of green

“STATIC” mode adjustment

22. Enter to SKEW “R-SKEW” mode by pressing TV/VIDEO

23. Adjust “R-SKEW” so that the vertical and horizontal line of center overlaps with green (see figure)

24. Press “7” then “ACTION” key on remote to save changes

“SKEW” mode adjustment

**NOTE:**

Remember always save data following each adjustment by pressing “7” key on remote, then ACTION.

25. Enter to LINEARITY “R-LINEAR” mode by pressing TV/VIDEO.

26. Adjust Horizontal linearity (see figure)

27. Enter to SIZE "R-SIZE" mode by pressing TV/VIDEO
28. Adjust so that the line on the border closes to the screen frame at top, bottom, left and right (see figure)
29. Enter to PIN "R-PIN" mode by pressing TV/VIDEO
30. Adjust horizontally and vertically (see figure)
31. Enter to CORNER "R-CORNER" mode by pressing TV/VIDEO.
32. Adjust corners (see figure)
33. Enter to KEY "R-KEY" mode by pressing TV/VIDEO
34. Adjust KEY (see figure)
35. Display pattern of border and cross, then check that red overlaps green pattern, if it is not satisfactory, repeat from step 19.
36. Enter to STATIC "B-STATIC" mode.
37. Press "1 or 3" key repeatedly on remote until only green and blue pattern are displayed
38. Adjust B-STATIC so that the center of blue overlaps with the center of green (see figure)

"B-STATIC" mode adjustment

39. Perform all adjustments for blue (B-SKEW, B-LINEAR, B-SIZE, B-PIN, B-CORNER, B-KEY)
40. Display border and cross pattern and confirm that blue overlaps with green pattern, if it is not satisfactory, repeat for blue.
41. Press "1 or 3" key repeatedly on remote until green, red and blue (white), confirm that red and blue overlaps with green pattern.
42. Press "7" key on remote, then ACTION to save changes.
43. Press POWER then ACTION to exit adjustments or press TV/VIDEO for at least 3 seconds to change to Fine Adjustment Mode.

## 18.2. Fine adjustment mode (FINE) (convergence)

**NOTE:**

It is strongly recommended to first read and understand the following section prior to make any adjustment. / Convergence adjustment must be perform for 480i-p (same for interlace & progressive), ZOOM 480i and 1080i.

**HELPFUL HINT:**

The easiest way to adjust convergence is to start adjusting from the center of the screen to the borders in all the convergence adjustments.

Once in “FINE” convergence mode press “4” on remote control frequently to change crossed sections, this helps to check convergence more accurate in more sections of the picture. Please see the following figures that show the cycle, this does not have any effect on the positions of the cursor.

“FINE” convergence mode default Grid

“FINE” convergence mode after pressing “4” on remote

“FINE” convergence mode after pressing “4” on remote

PRESS BUTTON	TO
1(go) or 3(back)	change color view
2	change pattern
4 (only FINE mode)	change crossed sections
5	overlap
* 7	save data
8	copy from
9	clear
POWER	exit
RECALL	display values
R-TUNE	cycle colors
TV/VIDEO	change mode
TV/VIDEO (3 secs)	switch convergence mode (FINE/ COARSE)

\*

When “7” is pressed and the data is saved, it will overwrite the factory default.

#### ABOUT PATTERN:

- NTSC signal to adjust 480i-p (same for interlace and progressive)
- 480i signal with ptv in ZOOM aspect to adjust / Z480i
- 1080i signal to adjust 1080i

In “FINE ADJUSTMENT MODE” options, press “MUTE” key on remote to switch between “cursor” mode and “data” mode.

- **Cursor mode (cursor flashing):** Allows cursor movement by pressing VOL right - left and CH up - down.
- **Data mode (cursor fixed):** Allows making adjustment by pressing VOL

right - left and CH up - down.

**PROCEDURE:**

1. To Enter to “G-EASY” mode (for green):
  - Select “EASY” DAC
  - Press POWER on remote
  - Press TV/VIDEO (repeatedly) to select mode.
  - Press R-TUNE (repeatedly) to select color
2. Press “2” repeatedly and apply the pattern of crosshatch.
3. Press “4” frequently to change crossed sections, this helps to check convergence more accurate in more sections of the picture.
4. Press “1 or 3” repeatedly until the pattern becomes green.
5. Press RECALL to display values.
6. In “EASY” mode, the adjustment value changes by 4 steps
7. “EASY” mode allows to move lines horizontally and vertically from the center of cursor

“EASY” mode adjustment, possible locations for cursor

8. This mode affects a wide area around the cursor than other adjustment modes, See values on screen by pressing RECALL on remote
9. Begin adjustment from the center to the edge of the screen.
10. Adjust when the cursor is not flashing by pressing CH up/down and VOL right/left on the remote control, if the cursor is flashing press MUTE on the remote

“EASY” mode adjustment

11. To move the cursor press **MUTE** on the remote (cursor flashes), then move the cursor to any of the positions for “EASY” mode
12. This adjustment may help to make rounded lines become straight lines.
13. Adjust to make lines as straight as possible
14. Enter to POINT “G-POINT” (for green) mode by pressing TV/VIDEO.
15. “POINT” mode allows to move line horizontally and vertically from the perimeter of cursor making rounded lines become straight
16. In “POINT” mode, the adjustment data changes by 2 steps, See values on screen by pressing **RECALL** on remote
17. When the cursor is located in the outer area of the border the cursor starts to flash from one side to other, the location is for the non-visible area and the most outer side of screen (inside the ovals area, see figure); This applies to “LINE”, “POINT” & “ORIGIN.POINT” modes.
18. Begin adjustment from the center to the edge of the screen

“POINT” & “ORIG. POINT” mode adjustment

19. Adjust to make lines as much straight as possible

20. When slightly adjustment is needed, use “ORIG. POINT” mode.
21. To enter to “G-ORIG. POINT” (for green) mode press TV/VIDEO.
22. With “ORIG. POINT”, the adjustment data changes by 1 step, this allows more detail in the adjustment. Display values on screen by pressing RECALL on remote
23. Confirm that green adjustment is good enough, if adjustment is not satisfactory, repeat adjustments.
24. Enter to LINE “G-LINE” mode by pressing TV/VIDEO.
25. LINE mode allows to move each single line horizontally and vertically (see figure)
26. Begin adjustment from the center to the edge of the screen (see figure)
27. Adjust to make distribute lines

LINE, POINT, ORIG. POINT modes, possible locations for cursor

28. Then press “1 or 3” on the remote until red and green appears.

**NOTE:**

Since convergence adjustment will not allows to adjust every single cross section of the grid, it is very important to adjust, so that overall looks best, in “FINE” mode press “4” frequently on remote controlto cycle crosshatch pattern to verify convergence.

“LINE” mode adjustment

29. Perform adjustments for red so that red overlaps green, do not move green.
30. Press “1 or 3” on the remote until yellow (red and green) and blue appears, do not move green or red.
31. Perform adjustments so that blue overlaps Yellow (red and green).
32. Press “1 or 3” key on remote to display red, green and blue (white).
33. At this point the crosshatch pattern should look white.
34. If the crosshatch pattern is not only white, repeat adjustment for that specific color (red or blue).
35. Once the crosshatch pattern looks only white, perform the adjustments for White only (“POINT”, “ORIG. POINT” & “LINE”), notice that each adjustment must be only for white (red, green, blue)
36. Adjust white for a good line distribution and make lines completely straight.
37. Press “7” key on remote, then ACTION to save changes.
38. Press POWER then ACTION to exit convergence adjustments (DACs menu appears).

### 18.3. Horizontal and vertical size check

1. Apply a pattern that permits to check that horizontal and vertical proportion of the image is correct

2. Confirm that horizontal and vertical center of the picture is located in the center of the screen.
3. Check that the image is proportional horizontally and vertically, proportion is different on every aspect.

#### 18.4. Convergence alignment template

The convergence alignment template is a grid approximately the size of the viewing screen used to ensure the proper size and shape of the alignment rasters. It is 6 blocks across by 8 blocks high. The grid dimensions vary with the mode of operation. Apply a convergence alignment template to the viewing screen of the PTV. Make sure the center lines are properly aligned. If a template is not available, one can be created by following the instructions below. Create a convergence alignment template by drawing a pattern, as in the figure, in the actual dimensions on transparent film or tracing paper. Start with the Horizontal and Vertical Center Axis and work outwards until the pattern is complete. Pay attention to the actual dimensions of the pattern.

Template dimensions:

- 53" Models: 1036mm horizontal x 584mm vertical.
- 53" Models: 1036mm horizontal x 584mm vertical.
- 53" Models: 1036mm horizontal x 584mm vertical.

Grid dimensions:

SCREEN	MODE	HORIZONTAL	VERTICAL
47"	480i_p	43.00_mm	19.50_mm
	480i ZOOM	43.00_mm	25.50_mm
	1080i	40.00_mm	20.80_mm
53"	480i_p	48.70_mm	22.10_mm
	480i ZOOM	48.70_mm	28.80_mm
	1080i	46.60_mm	23.10_mm
56"	480i_p	51.50_mm	23.30_mm
	480i ZOOM	51.47_mm	30.48_mm
	1080i	47.90_mm	24.90_mm

#### NOTE:

A convergence alignment template, part number TXFQD01ESER for 47", TXFQD01FSER for 53" and

TXFQD04ESER1 for 56" is available through Matsushita/Panasonic Services

## 19. Service Mode (electronic controls)

This receiver has electronic technology using the IC bus concept. It performs as a control function and it replaces many mechanical controls. Instead of adjusting mechanical controls individually, many of the control functions are now performed by using "on screen display menu". (The service adjustment mode.)

### NOTE:

It is suggested that the technician reads all the way through and understand the following procedure for entering/exiting the service adjustment mode; then proceed with the instructions working with the receiver. When becoming familiar with the procedure, the flow chart for service mode may be used as a quick guide.

### 19.1. Quick entry to service mode:

When minor adjustments need to be done to the electronic controls, the method for entering the service mode without removal of the cabinet back is as follows, using the remote control:

1. Select SET-UP icon and select CABLE mode.
2. Select TIMER icon and set SLEEP time for 30 Min.
3. Press "ACTION" then VOL up to exit menus.
4. Tune to the Channel 124.
5. Adjust VOLUME to minimum (0).
6. Press VOL ← (decrease) on receiver. Red "CHK" appears in upper corner.

To toggle between aging and service modes:

While the "CHK" is displayed on the left top corner of the CRT, pressing "ACTION" and "VOL" UP on the TV simultaneously will toggle between the modes. Red "CHK" for service mode and yellow "CHK" for aging.

7. Press **POWER** on the remote control to display the service adjustment modes menu, select adjustment by pressing the VOL right/left buttons and CH up/down buttons on the remote and **ACTION** to enter the adjustment.

Service mode menu

MODE	480I 4:3 D-IN	480P 16:9	1080I DW	HX ZOOM	WX
MTS	MTSIN	SEPAL	SEPAH		
CLOCK	CLOCK				
VIDEO	COLOR	B-Y_G	TINT	R-Y_A	
	BRIGHT	CONT	CUT R	CUT B	
	R DR	B DR	I-ABL	C_OFF	
HDEF	H POS	H WID	PCC	TRAP	
	BTMG	TOPG		H-EHT	
VDEF	V-AMP	V-C	V-S	V-EHT	
				EHTFB	
CONV	MUTE	COARS	FINE		
DAF	H-PAR	V-SAW	V-PAR		
OTHER	ACL	HHS	W-POS	LIMIT	
	AREA	IN ► EX	IN ► EX		

**NOTE:**

Some adjustments are available only in some modes (480i, 480p, 1080i); it is needed to apply the format; For some adjustments is required to perform adjustment for each format; convergence adjustment must be performed for 480i-p (same for interlace & progressive), ZOOM 480i and 1080i. A 1080i, 480p, 480i pattern can be obtained from Panasonic's TU-DST51 set-top box DTV decoder.

## 19.2. Exiting the service mode:

This PTV goes out from service mode when it is unplugged or turned OFF. To exit the service mode, turn the TV OFF or unplug the PTV from AC.

**Other method**

Press **ACTION** and **POWER** on the receiver simultaneously for at least 2 seconds. The receiver momentarily shuts off; then comes back on tuned to channel 3 with a preset level of sound. Any programmed channels, channels caption data and some others userdefined settings will be erased when exited by pressing **ACTION** and **POWER** on receiver.

**IMPORTANT NOTE**

**Always check that PTV exits the service mode**

To check colors:

Press **RECALL** on the remote control when in service mode (red "CHK" is displayed) to enter the purity field check mode.

Color check

### 19.3. Service adjustment default values for items

REGISTER	DESCRIPTION	FORMAT

**NOTE:**

The above table shows the default values for the service items, this values can change depending on the serviced PTV.

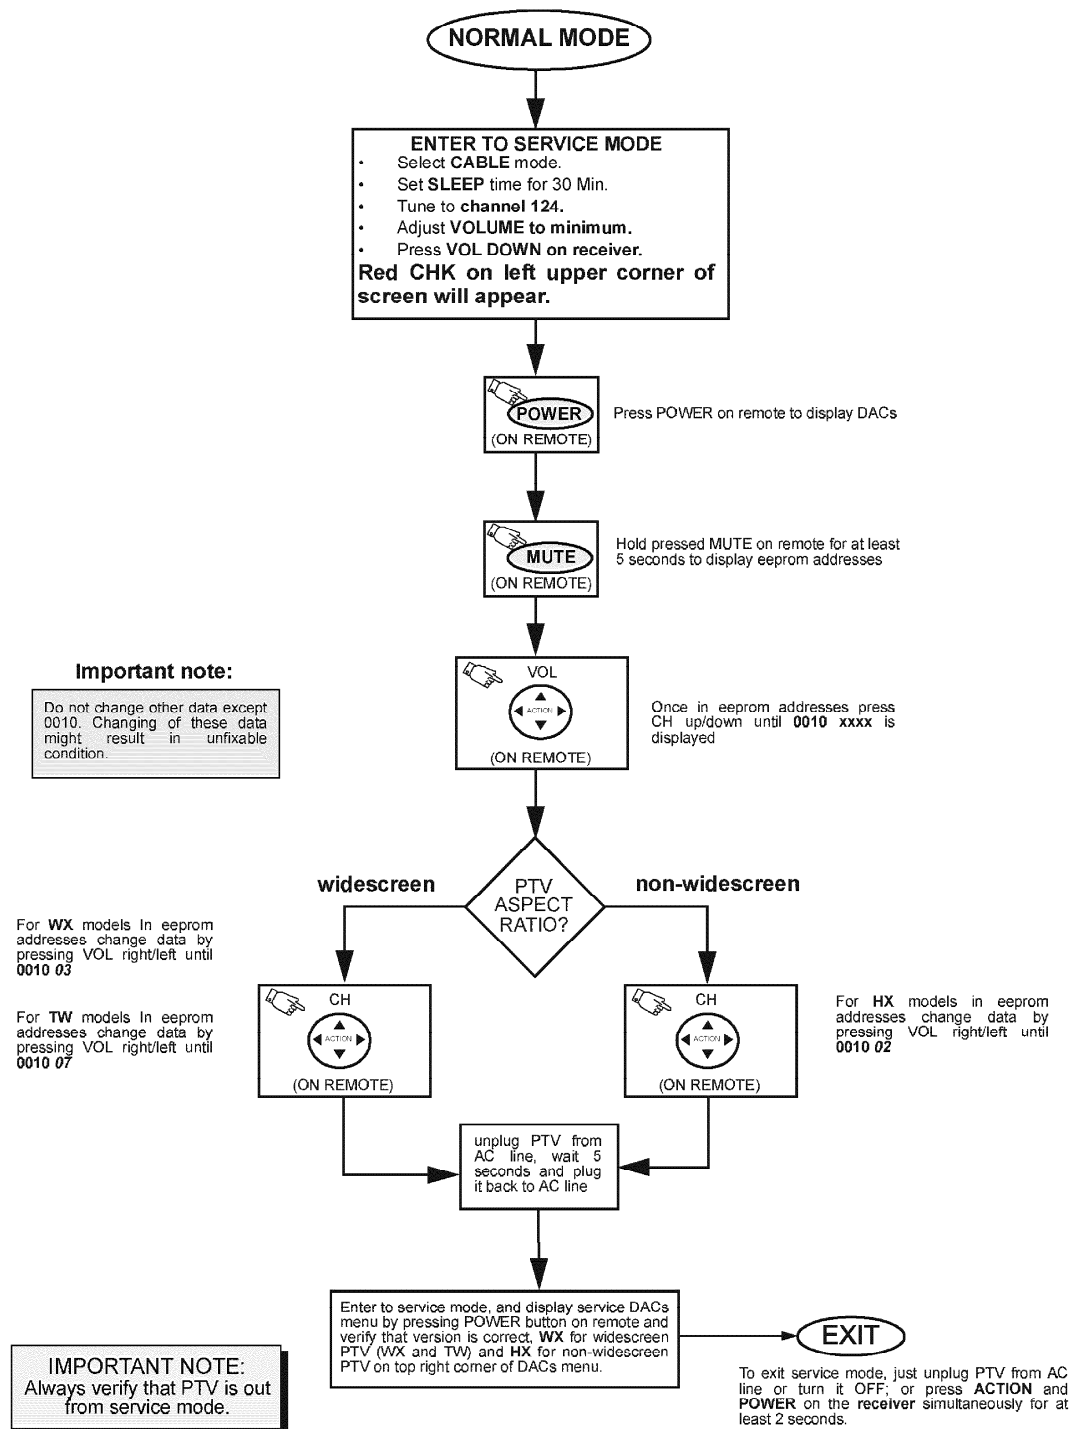

Important notice:

**Since Widescreen 16:9 and non-widescreen 4:3 PTVs use the same light box, for this reason is important to set it to the correct version (16:9 or 4:3). To check this please see “Instructional flow chart for format aspect switching” in the following section.**

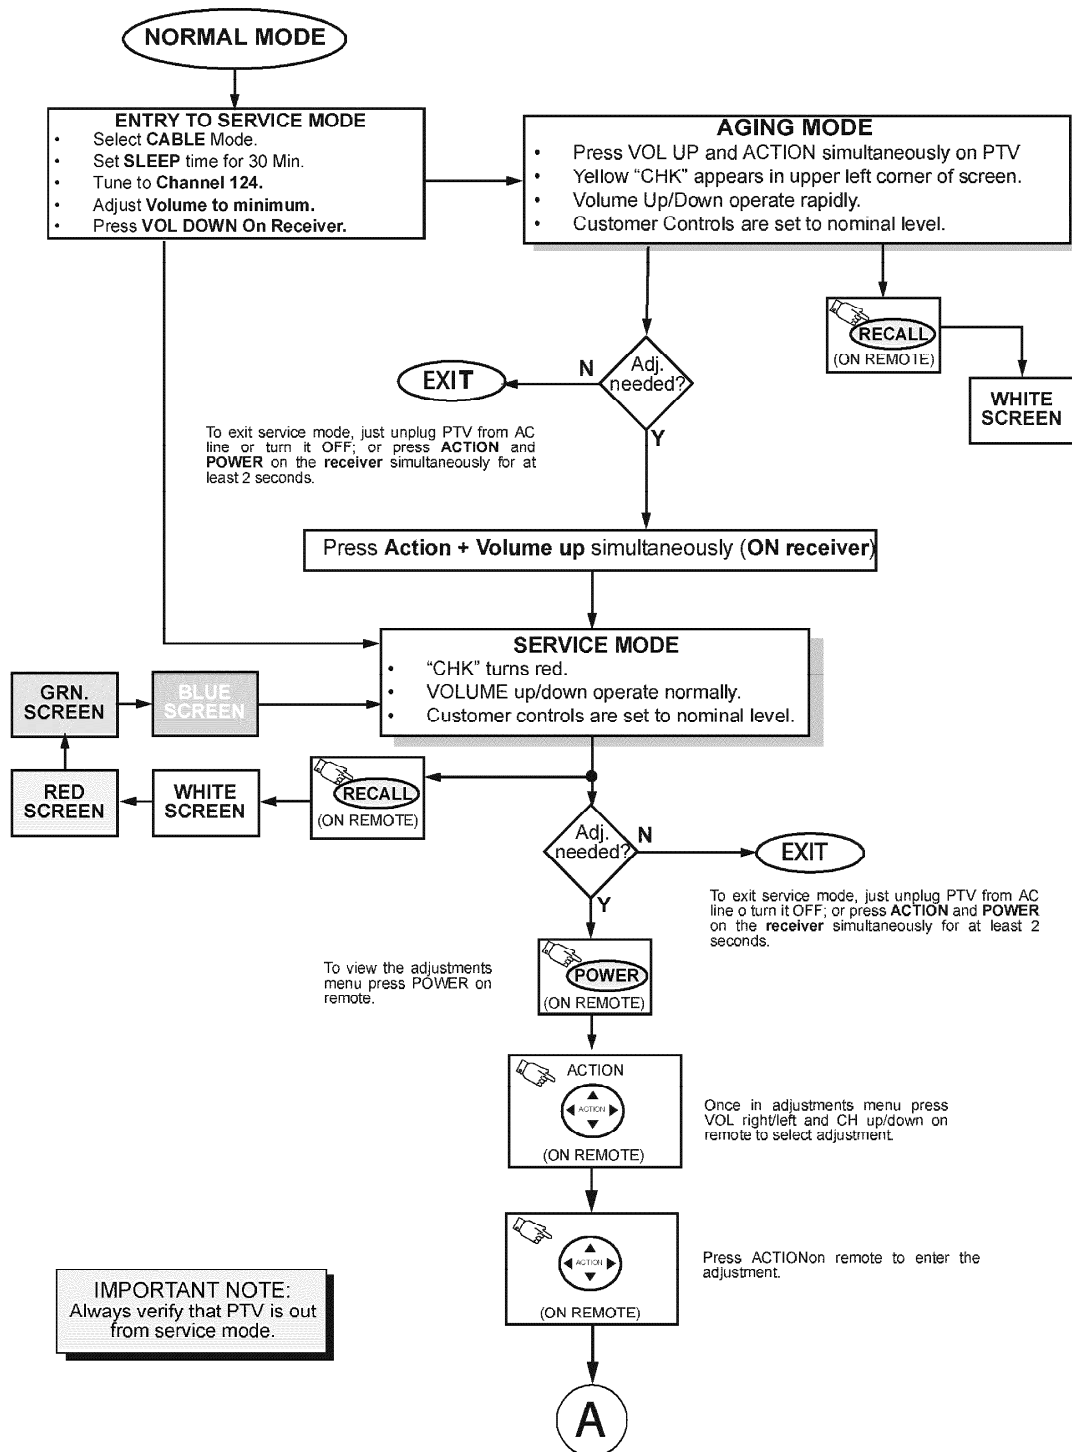

**19.4. Instructional flow chart for light-box format aspect switching (WX 16:9, TW 16:9 or HX 4:3)**

## Notes:

### IMPORTANT SAFETY NOTICE

THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES THAT ARE IMPORTANT FOR PROTECTION FROM X-RADIATION, FIRE AND ELECTRICAL SHOCK HAZARDS. WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURERS SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS DESIGNATED WITH A  $\Delta$  IN THE SCHEMATIC.

### CHIP TRANSISTOR LEAD DESIGNATION

### SCHEMATIC NOTES

- Resistors are carbon 1/4W unless noted otherwise.
  - Capacitors are ceramic 50V unless noted otherwise.
  - Coil value notes is inductance in  $\mu\text{H}$ .
  - Test point indicated by  $\bullet$  ; Test point but no pin  $\uparrow$ .
  - Components indicated with  $\Delta$  are critical parts and replacement should be made with manufacture specified replacement parts only.
  - (BOLD LINE) indicates the route of B+ supply.
  - The schematic diagrams are current at the time of printing and are subject to change without notice.
  - Ground symbol  $\downarrow$  indicates **HOT GROUND CONNECTION**;  $\uparrow$  indicates COLD GROUND.
- NOTE: All other component symbols are used for engineering design purposes.*

### VOLTAGE MEASUREMENTS

- Voltage measurement:
    - AC input to the Receiver is 120V. NTSC (HD, 1125i & 525P when applicable) signal generator is connected to the antenna of the Receiver. (Color bar pattern of 100 IRE white and 7.5 IRE black.)
    - All Picture and Audio adjustments are set to Normalize.
    - TV ANT/CABLE - (Set-Up Menu) in TV/ANT Mode
    - Volume - Min.
    - TV/Video SW - TV position
    - Audio Mode - Stereo
  - Voltage readings are nominal and may vary  $\pm 10\%$  on active devices. Some voltage reading will vary with signal strength and picture content.
  - Supply voltages are nominal.
  - Ground symbol  $\downarrow$  indicates ground lead connection of meter. Incorrect ground connection will result in erroneous readings.
- CAUTION: Incorrect ground connection of the test equipment will result in erroneous readings.**

### WAVEFORM MEASUREMENTS

- $\textcircled{3}$  indicates waveform measurement. (Measurement can be taken at the best accessible location in common to the indicated point.)
  - Taken with an NTSC signal generator connected to the antenna terminal. (NTSC color bar pattern of 8 bars of EIA colors, 100 IRE white and 7.5 IRE black.)
  - Customer Controls (Picture/Audio Menu) are set to Normalize. Volume is set to "MIN".
  - All video and color waveforms are taken with a wideband scope and a probe with low capacitance (10 to 1). Shape and peak altitudes may vary depending on the type of Oscilloscope used and its settings.
  - Ground symbol  $\downarrow$  shown on waveform number indicates (Hot) ground lead connection of the Oscilloscope.
- CAUTION: Incorrect ground connection of the test equipment will result in erroneous readings.**

*readings.*

## **23.2. Notas de los diagramas esquematicos**

# Notas

## NOTA DE SEGURIDAD

LOS DIAGRAMAS ELÉCTRICOS INCLUYEN CARACTERÍSTICAS ESPECIALES MUY IMPORTANTES PARA LA PROTECCIÓN CONTRA RAYOS-X, QUEMADURAS Y DESCARGAS ELÉCTRICAS. CUANDO SE DE SERVICIO ES IMPORTANTE USAR PARA REEMPLAZO DE COMPONENTES CRÍTICOS, SOLO PARTES ESPECIFICADAS POR EL FABRICANTES. LOS COMPONENTES CRÍTICOS ESTAN SEÑALADOS EN LOS DIAGRAMAS POR EL SIMBOLO .

## IDENTIFICACIÓN DE TERMINALES PARA TRANSISTORES EN CHIP

## NOTAS DE LOS DIAGRAMAS

- Las Resistencias son de Carbón de 1/4W, a menos que se indique otra característica.
- Los Capacitores son de Cerámica para 50V, a menos que se indique otra característica.
- El valor indicado de las Bobinas es la inductancia expresada en  $\mu\text{H}$ .
- Los puntos de prueba en la terminal de algún componente son indicados por  Los puntos de prueba fuera de los componentes se indican con .
- Los componentes señalados con el símbolo  son considerados componentes críticos y deben ser reemplazados sólo con las partes especificadas por el fabricante.
-  (LINEA GRUESA) indica las líneas de alimentación de los Voltajes B+.
- Los diagramas eléctricos están sujetos a cambio sin previo aviso.
- El símbolo  indica que es una conexión a **Tierra Caliente** y el símbolo  indica conexión a **Tierra Fría**.

**NOTA:** Los demás símbolos de componentes incluidos son usados con fines de diseño.

## MEDICIÓN DE VOLTAJES

- Medición de voltaje:
  - El voltaje de entrada al Receptor es de 120V de Corriente Alterna. Un generador de patrones con formato NTSC se conecta a la entrada de la antena. (Patrón de Barras de Colores con 100 IREs para el Blanco y 7.5 IREs para el Negro.)
  - Los ajustes de los Menus Picture y Audio se normalizan.
- El símbolo  indica el tipo de tierra que se utiliza en la conexión del medidor.

**PRECAUCION:** Si no se utiliza la conexión a la tierra adecuada, se obtendrán mediciones equivocadas y podría dañar el equipo de medición.

## MEDICIÓN DE FORMAS DE ONDA

- Un símbolo como  indica el punto para medir una señal. (La medición puede hacerse en el punto con mayor accesibilidad, siempre que sea común al indicado.)
- Se midieron utilizando un generador con formato NTSC conectado a la terminal de la antena. (Patrón de 8 Barras de Colores EAI, formato NTSC de 100 IREs para el Blanco y 7.5 IREs para el Negro.)
- Los ajustes de usuario de los Menus PICTURE y AUDIO se normalizaron
- banda alta y con un punta de prueba de baja capacitancia (10 a 1). La forma y amplitud de las ondas puede variar según el tipo de osciloscopio que se utilice y sus características.
- El símbolo de tierra  que aparece junto al número de la forma de onda, indica que se utiliza conexión a **Tierra Caliente** en el extremo negativo de la punta de prueba.

<p>PICTURE y AUDIO se normalizaron. Posteriormente el nivel de volumen se ajusta al mínimo.</p> <p>4. Las formas de onda de Video y Color fueron tomadas con un osciloscopio de</p>	<p><b>PRECAUCION:</b> Si no se utiliza la conexión a la tierra adecuada, se obtendrán mediciones equivocadas y podría dañar el equipo de medición.</p>
